

Sony Soloist® ASL Digital Video Comparative Recorder

The Soloist ASL option extends the traditional Soloist digital audio comparative recorder into a visual comparative recorder. Initiating the ASL mode in the Soloist software opens a window for the display of the student's camera. Program video is displayed in a separate window. Students are able to view the program while recording their own image for comparison. Students can also listen to an audio file and record their image.

Sony Virtuoso™ ASL Real-Time Video

The Virtuoso ASL plug-in is a combination of software – a video capture card and an NTSC camera. Virtuoso ASL uses full motion video, not web cams, so that all of the nuances of even finger spelling are captured. Video is recorded as MPEG4 files for high quality video and smaller file sizes.

Sony Virtuoso™ American Sign Language Learning System

Communicating Visually

New video options are now available for the Sony Virtuoso™/Soloist® Digital Language Learning System.

SANS has taken the fundamental audio communication teaching modalities inherent

to traditional language learning systems and developed a solution for video communication to teach ASL in schools and colleges, interpreter training programs, and other courses of study that use "visual image" for communication.

Students can now do video comparative recording with the Soloist ASL option giving them the opportunity to practice, view, and compare to hone their language skills.

With the Virtuoso ASL plug-in option, all of the real time instructional lab communications between the teacher and students, including All Call, Monitoring, Student Modeling and Intercom, are realized using video cameras installed at each student/teacher position. The teacher can communicate with students and students can work together using video windows on their PCs.

With the various audio/video options now available, the Sony Virtuoso/Soloist ASL family of products presents new vistas in language learning.

VIRTUOSO™
Instructional Control Software

Teaching With the Virtuoso™/Soloist® ASL Software Suite

Audio/Video Comparative Recording

- Playback an audio file while recording a video file (optionally with audio).
- Playback of all in synchronization

Video/Video Comparative Recording

- Playback a video file while recording a video file (optionally with audio).
- Playback of all in synchronization
 - Video file playback in one window, local camera/recording in a second window

Real-time Audio/Video Comparative Recording

- Teacher or model student can speak while students record video
- Teacher can “stream” audio (from any source) while students record video

Real-time Video Communications

- Monitor
 - View any student camera on teacher PC
- All Call, Group Call and Model
 - Send teacher’s/student’s camera video to all or a Group of students
- Intercom, Pairing
 - Teacher-student/student-student “video chat”
- All Call + Model
 - Send teacher’s and a student’s camera video to all
